Shivam Garg

Phone: +91 9457372520 | **Email**: svmgarg@gmail.com | **LinkedIn**: www.linkedin.com/in/svmgarg

Professional Summary

- Lead Software Engineer with **11+ years of experience** building scalable distributed systems, data platforms, and cloud-native microservices.
- Expertise in **large-scale data processing, event-driven architecture, and system design** using Java, Scala, Spark, Kafka, and Azure.
- Proven ability to **drive end-to-end ownership**, optimize performance, and deliver high-impact solutions improving reliability, scalability, and cost efficiency.

Technical Skills

- **Languages & Backend:** Java, Scala, SQL, Spring Boot, Spring Security, Microservices, REST APIs, Multithreading
- **Distributed Systems & Streaming:** Apache Kafka, Azure Event Hub, ActiveMQ, Event-Driven Architecture
- **Data Engineering:** Apache Spark, Spark SQL, Delta Lake, Parquet, Distributed Data Processing
- **Cloud & Infrastructure:** Microsoft Azure, Kubernetes, Docker, Azure Functions, Helm, CI/CD (TeamCity), Git
- **Databases:** Redis, PostgreSQL, Azure Data Explorer (Kusto), Oracle Database
- **Observability:** Prometheus, Grafana, Azure Monitor, Log Analytics
- **Core Concepts:** System Design, Distributed Systems, Scalability, Performance Optimization, BCDR, Fault Tolerance

Professional Experience

- **Senior Software Engineer | Microsoft India** *Feb 2023 – Present*
  - Led a **4-member engineering team**, driving technical design, task prioritization, implementation, and delivery of data platform initiatives.
  - Owned design and delivery of **Spark-based data platform pipelines** processing **terabytes of Azure Audit data** to power analytics in Azure Data Explorer.
  - Improved data processing performance by **60% (50 to 20 minutes)** through partition optimization, execution tuning, and memory management improvements.
  - Led migration from legacy logging systems to **Azure Data Explorer**, improving system reliability and **reducing operational costs by $300K annually**.
  - Designed and implemented **BCDR strategy** for Azure Function-based ingestion systems consuming from **Event Hub**, ensuring high availability and fault tolerance.
  - **Strengthened platform security** by implementing **user-scoped authentication**, replacing application-level tokens.
  - Provided **technical leadership and mentorship** through design reviews, code reviews, and troubleshooting complex distributed data processing issues.
  - **Coordinated cross-team collaboration** to deliver high-priority platform enhancements and operational improvements on time, ensuring production readiness and reliable rollouts.

- **Technical Lead | Oracle, Hyderabad** *Jul 2019 – Jan 2023*
  - Led architecture and development of **CRM data integration systems** supporting **thousands of enterprise customers**.
  - Drove migration from monolith to **Spring Boot microservices**, improving scalability, deployment velocity, and maintainability.
  - Designed and built **asynchronous data pipelines** for large-scale export workflows using messaging systems and batch processing.
  - Reduced processing latency by **50%** through parallelization and optimized batch execution strategies.

- Established engineering best practices through **design reviews, code reviews, and mentorship**, improving team productivity and code quality.

- **Software Engineer | Harman, Gurugram** *Jul 2015 – Jun 2019*
  - Developed **Spring Boot microservices** for IoT platforms handling device communication and data processing.
  - Designed scheduling framework for IoT command execution using **Quartz Scheduler**.
  - Optimized persistence and query performance using **MongoDB**.
  - Improved code quality and maintainability using **SonarQube** and API documentation via Swagger.

Academic Qualification

- Bachelor of Technology (Computer Science and Engineering) *2011 – 2015*
  Uttar Pradesh Technical University
