Shivam Garg

Phone: +91 9457372520 | **Email**: svmgarg@gmail.com | **LinkedIn**: www.linkedin.com/in/svmgarg

Professional Summary

- Lead Software Engineer with **11+ years of experience** designing scalable distributed systems and data platforms.
- Expertise in **system design, distributed data processing, and cloud architecture**, with a track record of **technical leadership, performance optimization, and cost reduction** across enterprise platforms.

Technical Skills

- **Languages & Backend:** Java, Scala, SQL, Spring Boot, Spring Security, Microservices, REST APIs, Multithreading
- **Distributed Systems & Streaming:** Apache Kafka, Azure Event Hub, ActiveMQ, Event-Driven Architecture
- **Data Engineering:** Apache Spark, Spark SQL, Delta Lake, Parquet, Distributed Data Processing
- **Cloud & Infrastructure:** Microsoft Azure, Kubernetes, Docker, Azure Functions, Helm, CI/CD (TeamCity), Git
- **Databases:** Redis, PostgreSQL, Azure Data Explorer (Kusto), Oracle Database
- **Observability:** Prometheus, Grafana, Azure Monitor, Log Analytics
- **Core Concepts:** System Design, Distributed Systems, Scalability, Performance Optimization, BCDR, Fault Tolerance

Professional Experience

- **Senior Software Engineer | Microsoft India** *Feb 2023 – Present*
  - Led a **4-member engineering team**, driving technical direction, prioritization, and end-to-end delivery of data platform initiatives.
  - Owned the **design and delivery of Spark-based data pipelines** processing **100M+ audit records daily**, powering analytics and reporting.
  - Led the **design and implementation of a BCDR strategy** for Azure Functions consuming from **Azure Event Hubs**, supporting **30M+ events/day with zero data loss**.
  - Led the migration of legacy logging systems to **Azure Data Explorer (ADX)**, improving reliability and delivering **$300K in annual cost savings**.
  - Drove multiple **security initiatives**, including **NSP enforcement** for Azure resources and replacing application-level tokens with **user-scoped authentication**.
  - Provided **technical leadership and mentorship** through architecture and code reviews, guiding engineering decisions and resolving complex distributed data processing challenges.
  - Optimized Spark data pipelines through **cache eviction fixes** and restructuring into **6-hour processing windows**, reducing daily execution time by **50% (160 to 80 minutes)**.
- **Technical Lead | Oracle, Hyderabad** *Jul 2019 – Jan 2023*
  - Led architecture and development of **CRM data integration systems** supporting **thousands of enterprise customers**.
  - Drove migration from monolith to **Spring Boot microservices**, improving scalability, deployment velocity, and maintainability.
  - Designed and built **asynchronous data pipelines** for large-scale export workflows using messaging systems and batch processing.
  - Reduced processing latency by **50%** through parallelization and optimized batch execution strategies.
  - Established engineering best practices through **design reviews, code reviews, and mentorship**, improving team productivity and code quality.
- **Software Engineer | Harman, Gurugram** *Dec 2017 – Jun 2019*
  - Developed **Spring Boot microservices** for IoT platforms handling device communication and data processing.
- **Software Engineer | TCS, Chennai** *Jul 2015 –– Dec 2017*

- Developed RESTful services for enterprise CRM applications using Java and Spring MVC.

Academic Qualification

- Bachelor of Technology (Computer Science and Engineering) *2011 – 2015*
  Uttar Pradesh Technical University
